

Download Your Own Automatically Updating Copy Of www.Tparents.org

Gary Fleisher
November 22, 2021

You can make your own copy of www.Tparents.org. I recommend using free HTTrack software (<http://www.httrack.com/>) to do this. (You can actually use any web site copying software - search on Google.)

My experience is that HTTrack runs in the background slowly, so it doesn't interfere with other use of the computer.

It will allow you to access www.Tparents.org directly on your computer - no internet involved.

It may take several weeks to download www.Tparents.org using HTTrack, because www.Tparents.org has over 120,000 files. You can turn off your computer and when you start it again just start HTTrack and the your download of www.Tparents.org will continue. Currently www.Tparents.org takes up about 40 GB of disk space. If you are going to copy www.Tparents.org to its own drive I suggest at least a 64GB drive.

You can leave HTTrack running or occasionally run HTTrack to update your copy of www.Tparents.org. (About a hundred new web pages are added to www.Tparents.org every week.) Updating with HTTrack happens fairly quickly.
