

This March, Saeilo's Aviation Department signed a fuel supply contract with Woori Aviation

Jeong Soon Jo
March 2014

Woori Aviation established itself as a forest fire fighting company in 2013 and began carrying out forest fire fighting services in Jinan-gun, Jeonbuk, that same year.

The company now possesses the SIKORSKY AIRCRAFT model S-76B (12 seater), produced in America, and henceforth plans to add about 2 or 3 helicopters to their fleet.

The contract's conditions allow for 20,000 liters of fuel per year, and will increase gradually, depending on the number of helicopters acquired by the company.

In order to increase fuel transportation capabilities, Saeilo increased the amount of tanker trucks in its fleet.

25-ton Hyundai Super Trucks (with fuel carrying capacities of 26,000 liters) were purchased and installed with fuel feeder and waterproofing devices. The trucks were painted with Saeilo's signature design, and are expected to be put to use starting March 31st.

With the sale of obsolete equipment and purchase of the heavy-duty tanker trucks, nationwide demands for aircraft fuel can be met with safe and efficient delivery in large amounts. Distribution costs are expected to decrease and man power efficiency is expected to improve with the implementation of these new changes.

Saeilo will contribute to business development through the smooth provision of aircraft fuel and cooperative business practices.
